Figma

AWARDS

DevNet Associate – Cisco

Networking Academy,

Advanced Search Engine

Optimization Certification

Program(SEO)

improving booking confirmations and customer communication.

- Collaborated with backend engineers through weekly sprint meetings to ensure timely delivery.

Key Impact: Improved user checkout flow and reduced booking errors by streamlining data handling and payment processes.

Scroll n Shop— *Details: (web-development - E-commerce)*

Description:

- Customized Shopify theme to align with brand identity and improve user experience.
- Developed reusable templates and sections using Liquid for flexible store layout changes.
- Created custom blocks to give store owners the ability to easily update content without coding.
- Optimized store performance and layout for both desktop and mobile devices.

Key Impact: Improved the store's maintainability and visual appeal while empowering non-technical staff to manage the site independently.

Ease-support— *Details: (Web-development - Customer support)*

Technologies Used: [HTML, Css/TailwindCss, JavaScript/Typescript, Nextjs, NodeJs]

Description:

- Developed an internal customer support application to streamline handling of client queries.
- Designed and implemented an interactive dashboard to track tickets, customer profiles, and support metrics.
- Worked closely with the operations team to refine workflows and add features based on real usage feedback

Fruits— *Details: (Web-development - Real-time Gaming)*

Technologies Used: [HTML, Css TailwindCss, JavaScript/Typescript, Nextjs, NodeJs, Firebase, WebSocket]

Description:

- Commissioned to develop an interactive baccarat web application with real-time gameplay updates.
- Designed and implemented responsive user interfaces using

TailwindCSS and Next.js.

- Integrated Firebase live game state management.
- Utilized WebSockets to deliver instant updates to players during gameplay.

Ginie— *Details: (Web-development-scraping)*

Technologies Used: Cheerio, Playwright, Python, JavaScript

Description:

- Built a web scraping solution to extract sports league and match data from multiple external sources.
- Added Feature for handling data in Admin side
- Utilized Playwright for automated browser interactions and Cheerio for fast HTML parsing.
- Implemented data cleaning and transformation scripts in Python to standardize and validate scraped information.
- Designed logic to map scraped league data to internal identifiers, ensuring accurate integration into the company's database.
- Added error handling and retry mechanisms to improve scraping reliability.
